Some AGENCIES may require the CONTRACTOR to measure quantities in tons rather than cubic yards. In any situation where quantities are to be measured by weight, appropriate unit prices must be negotiated and verified by sampling, See Section 3.11, Measurement Methods, for more details. An hourly rate to install and maintain portable truck weighing scales at TDSR Sites has been included under Part B of the Price Proposal Form.

Unit Prices, unless otherwise indicated, shall include all labor (operators, laborers, supervisors), equipment and materials including but not limited to: supplies, equipment maintenance, repairs, repair parts, fuels, lubricants, cellular phones, transportation, traffic control and housing, if required, necessary to accomplish the project.

The quantities are estimated for the purpose of making an award. Locations of sites, debris quantities, destinations, material densities, etc. may differ substantially in an actual disaster.

A Ton-Mile equals the weight of animal carcasses in the trailer times the one-way mileage to the destination. Weight of carcasses will be determined by use of fixed or portable scales at disposal facility or incinerator site. Details of scope of work may require negotiations.

Use item 1.0 only for initial lane clearing operations approved by the AGENCY. See Part 2, Page 9, Debris Clearance from Right of Way and Public Property, for more information.

Items 2.0 through 5.0 refer to one-way hauling distances from public property or right of way to designated TDSRS or Disposal Facilities. These distances shall be determined by straight-line measurement. Maps will be provided by each AGENCY showing the 7.5, 15, 30 and 60-mile radius from each TDSRS and each Disposal Facility. Loading Site Monitors and Disposal Site Monitors will refer to these maps when calculating haul distances to be recorded on Debris Load tickets (Attachment 7). Distances for hauling reduced debris from TDSRS to Disposal Facilities, under Items
